Chapter 1

Work Sample Tests

In a new way to grow in candidates either before or during the interview process. It gives you a clear idea of how a candidate's two results are summarized in a consistent way. This is a huge improvement over the old way of interviewing and relying on gut feelings, and as a hypothesis about the candidate. Using the evidence created is structured, competency-based interview to check out candidates on several levels.

In conclusion, the best results from work sample tests will give you in practice's the candidate's fit with your company as well as their job performance almost to a 2.

While some have been made friendly, they also have their disadvantage if the are not designed well and efficiently. It can be a frustrated experience such a coding challenge that takes hours to complete. A structured case with limited information, capturing how the candidate will perform in a variety of situations.

Designing standard tasks or selecting mid-level case questions fails to consider the complexity of the company and could be a poor predictor of fit.

For example, a case requiring candidates to find the correct or balanced is highly valuable for a data scientist, but not for a marketer. It is also pointless. While this seems rather obvious, selecting an appropriate case can prove to be difficult. Ensure that you have a clear idea of what you want to see during the case and that through the case selection and implementation, you can measure it.

- Bear with the manager or even help the candidate to decide on the "human dimension" and technical expertise needed to perform the job and fit the company culture.
- Decide on a realistic length of time for the case. Usually, cases take no longer than an hour to complete.
- To evaluate a candidate over the entire experience, start with easier questions and build up to more difficult ones. Ensure you can measure all of them.
- Post-hiring, take the time to evaluate the efficacy of the case to ensure it hits case results reflect the abilities of the new hire.
- Collect candidate feedback and make advancements accordingly. Try to send out case feedback forms as soon as the candidate signs the contract so that their notes and answers are still top of mind.

Chapter 2

Personality Tests

Challenging who acquire skills beyond intelligence. Thankfully, psychometrics have come a long way over the last few decades and are a method that cannot be replaced as a CV. Compared to aptitude tests that measure what candidates can do, personality tests measure what they will do. Personality tests can help companies predict a candidate's fit and if they will be successful in the long-term.

By going beyond basic credentials, personality tests assess the capabilities a candidate's character to conduct consistently. Hence, they can be used to proactively root to help companies assess whether a candidate is likely to succeed in the role. Personality tests can also help companies identify red flags. Whilst hiring decisions should not be based on personality tests alone, they are a useful tool in determining if you are hiring the right candidate from a cultural standpoint.

Ensuring reliability, validity, and integrations interrogation of results is key to making sure personality tests effective.

Although personality tests are widely adopted, the tool is not without its critics. Critics are generally around the tools' validity and reliability, arguing that personality tests have no place in the hiring process. Additionally, many candidates have a negative perception of personality tests, thinking of putting on a false face, and being forced to act in a way that they think they have to in order to belong (and, of, faults). As employers the following points to get the most out of personality tests, while ensuring reliability and validity:

When deciding on which personality test to integrate into our recruitment process, read more about how the test was developed, reliability information, and technical features of the test. The above is packed with this, so it's worth looking at the personality assessment tool with psychometric validations. All-inline global administration each year and 30 years of research (now, 2020).

Personality tests are not simply a matter of psychology, and therefore are used to increase diversities. Some personality tests are created for clinical or general use, and may include questions that are not appropriate in the hiring process. Such as personality and historical assessments exist. Assessors work applicable to a much broader, and more appropriate, assessment in the workplace.

Right across on all dimensions do not always superior to the best candidate. We recommend that personality tests have a minimum fit for at least an hour to clearly achieve, and measure candidate accurately.

Chapter 3

Ability Tests

Generally speaking, ability tests assess the general mental (cognitive) of a candidate. CEBS, General mental ability (GMA) is a term used to describe the ability to learn at work as defined through a combination of work and active problems.

Three of general mental ability include a plan that assesses specific awareness such as verbal, numerical, and spatial ability. The overall score is considered the most important factor, outperforming other methods in individual performance than specific abilities. General mental ability (for short) is a strong predictor of job performance, training success, job segmentation and promotion as people with higher general mental ability acquire more job knowledge and learn (Ostroney, 2009). Generally, higher levels of job knowledge lead to better performance.

> GMA results accounts for approximately 26% of the variance in job performance.

How to assessments of general mental ability are typically measured by tests of reasoning, math and memory and processing. The GMA tests that fit into general how-to-do-more sort of psychological tests and have been with test-takers, customized functions that are relevant to the candidates.

What different ability test do we use and what do they measure?

Different positions require different abilities. To measure these abilities, has defined customized functions of GMA tests to measure the work performance. These functions are then combined to form a unique test of abilities specific to the language and country abilities.

In an example, if you are looking to recruit a CFO for Johnson Wing the role towards the ability to work with numbers and financial information. Therefore, you will use customized numerical and the impact of data-driven decisions on the company's future. Covering these abilities, to would ask candidates to do tests measuring numerical ability, decision, and evaluation reasoning.

On the other hand, if we were to recruit for a Marketing role, it would require measuring the ability to think outside the box, understand principles of creativity as well as being able to create content and communications from different perspectives. A combination of these tests would identify if the candidate has the right fit for your open Marketing positions.
